Banded krait on Pulau Ubin

**Subject**: Banded krait, *Bungarus fasciatus* (Reptilia: Serpentes: Elapidae).

**Subject identified by**: Contributor.

**Location, date and time**: Pulau Ubin, central section; 18 October 2012; 2228 hrs.

**Habitat**: On road along back mangrove vegetation.

**Observers**: Contributor and others.

**Observation**: A banded krait of about 130 cm total length was observed on the road. It hurried into a pile of plant debris in the mangroves while the observer was trying to photograph it.

**Remarks**: Singapore examples of this venomous snake have whitish instead of yellow bars, and seem to be associated with coastal habitats (Baker & Lim, 2012).
