Yellowfin blenny at Semakau Landfill

**Subject:** Yellowfin blenny, *Enchelyurus flavipes* (Teleostei: Blennidae).

**Subject identified by:** Kelvin K. P. Lim.

**Location, date and time:** Singapore Straits, reef flats around Semakau Landfill; 15 March 2009; 0815 hrs.

**Habitat:** Coral reef, intertidal zone at morning low tide.

**Observer:** Contributor.

**Observation:** An individual of about 5 cm total length was observed emerging from a crevice under a piece of coral rock in a tide pool. The photograph shows the frontal half of the fish with the head pointing to the left. The dusky yellow rear half is curled behind.

**Remarks:** Singapore is the type locality of this species (Allen & Erdmann, 2012) which has cryptic habits and is seldom seen in the open.
