Land snail *Geotrochus lychnia* at Bukit Batok Nature Park

**Subjects:** *Geotrochus lychnia* (Mollusca: Gastropoda: Trochomorphidae).

**Subjects identified by:** Contributor and Tan Siong Kiat.

**Location, date and time:** Singapore Island, Bukit Batok Nature Park; 19 April 2013; evening.

**Habitat:** Secondary forest.

**Observer:** Contributor.

**Observation:** About 10 examples of around 1 cm shell width, were observed hidden among wood and rocks along an earth bank.

**Remarks:** This native forest dweller has been found on rotting logs and leaf litter (Tan et al., 2012). The present observation appears to be the first record of this rarely seen species from Bukit Batok Nature Park.
