ABSTRACT. – Spider literature exclusive to Peninsular Malaysia is lacking and this work fills that gap with an annotated checklist of 425 species in 42 families and 238 genera. Twenty species are here listed as new records for Peninsular Malaysia.

KEY WORDS. – Araneae, species list, new records, diversity, Malaysia.

INTRODUCTION

The spider fauna of South East Asia is relatively well known but that of Peninsular Malaysia is much less known in contrast to neighboring Singapore. Little work has been done on spiders and inventories exclusively on Peninsular Malaysia. This would hamper research and needless to say has important ramifications in terms of assessing the local biodiversity. Such implications are further aggravated when of late fundamental and baseline research are attracting less financial aid causing researchers to divert and concentrate on biotechnology work.

In theory and had been enhanced through many findings that spiders have the applied potential, for example to increase agricultural productivity in taking the role as pest control and able to limit pest densities (Barrion & Litsinger, 1995). Local possibilities, to name a few are from the family Araneidae; *Cyclosa bifida* and *C. mulmeinensis* that predares on rice leafhoppers, *Hasarius adansoni* and *Plexippus petersi* from family Salticidae also beneficial as biocontrol in ricefields.

Taxonomically, spiders are an important group globally comprised of more than 40,000 species under 106 families and 3,000 genera (Platnick, 2008). The Salticidae are the most diverse family recorded accounting for many recent discoveries and new species. This is no exception for Peninsular Malaysia spider fauna where salticid new genus and species were made by Zhang et al. (2006) in addition to six new species and one new record from Singapore and Malaysia (Zhang et al., 2003).

Such findings are evident of many more potential unknowns lurking in the Peninsular awaiting discovery. It is therefore our hope and primary objective that this compilation would provide baseline information to encourage interest in local Arachnology.

MATERIAL AND METHODS

Specimens examined were collected from Peninsular Malaysia and deposited in the Raffles Museum of Biodiversity Research, National University of Singapore (RMBR, NUS) by various Arachnologists and other workers and by reviewing available literature which had included Malaysian spiders primarily, Koh (1989), Murphy & Murphy (2000), Song et al. (2002) and Platnick (2006). The museum collections that were inspected included very old materials dated back in the 1920s, for example the species *Lampropelma violaceopedes* Abraham, 1924 (Family: Theraphosidae) was collected from Johore in Nov.1923 and also from Langkawi and Kedah, Malaysia on 23 Apr.1928.

The annotated checklist is presented in alphabetical order of family in a format according to the sequence of: RMBR catalogue numbers for the museum collections that were examined are labeled as ZRC.ARA followed by numerical series. A small number of specimens are yet to be catalogued, thus unnumbered.

RESULTS AND DISCUSSIONS

Diversity of spiders

Together with old records (Table 1) and current new records (Table 2), this work showed that the spider fauna for Malaysia includes 425 species, belonging to 42 family groups and 238 genera. From a global perspective this is small as taxonomists currently recognize more than 40,000 species under 106 families and more than 3,000 genera (Platnick, 2008). Workman (1896) compiled a total of 203 species in his book which had a majority of the illustrations done from specimens collected from Singapore and Penang and a smaller number representatives from Celebes, East India, Java and New Guinea. More interestingly, Song et al.(2002) summarized in his work where it was claimed that Malaysia is home to 463 species of spiders from 42 families and 181 genera. This discrepancy from the current report, can be explained by the fact that species from Sabah and Sarawak were included in the list count. Murphy and Murphy (2000) had a total of 284 species from Malaysia and this observation is in accordance with that of Platnick (2006) which had 276 species.

In terms of numerical dominance, salticids topped the list with 107 species, some 24.9% of the total number of species in Peninsular Malaysia. The presence of a substantial species number makes Peninsular Malaysia of considerable species richness. This is further supported by the existence of local endemics, it is worthy to note that the greatest number of endemics belonged to the families Liphistidae (all 15 species) and Tetrablemmidae (10 of 11 species). Interestingly also the so called hot spots are mainly from areas of Batu Caves, National Park (Taman Negara) and the highland resorts within Pahang state. It should be noted that the level of endemism be regarded with caution as the checklist produced here may not be through an exhaustive sampling. Green (1999) cautioned that for a comprehensive sampling, various techniques should be utilized also to include day and night catches to ensure nocturnal spider families are represented in such studies. Attention should be drawn to the fact that although spiders maybe abundant in Peninsular Malaysia but their presence had been poorly documented.

Admittedly, the checklist here is not exhaustive and may be inadequate to reveal the true diversity of Peninsular Malaysian spiders. Nevertheless, this work constitutes an effort which should be regarded as an attempt to spark interest to study the local spider fauna.

Checklist on the new records and the available species for Peninsular Malaysia examined in the RMBR, NUS. It should be noted that the primary references for each species are as indicated in Table 1, where Murphy & Murphy (2000), Platnick (2006) and Song et. al.(2002) are cited. Remarks for new records are given in Table 2.

ARANEIDAE Simon, 1895

Anepsion depressum (Thorell, 1877)

4 females, 1 male, Juara track, Pulau Tioman, Pahang, det. D.X. Song, coll. D. Q. Li, 24 Jun.1999.

Cyclosa bifida (Doleschall, 1859)

3 females, ZRC.ARA.82, Juara track, Pulau Tioman, Pahang, det. D.X. Song, coll. D. Li, 24 Jun.1999.

C. insulana (Costa, 1834), new record

1 female, 1 male, ZRC.1994.66-67, garden in Genting, Pahang, coll. J.A and F. Murphy, 1-15 Feb.1988.

Cyrtophora moluccensis (Doleschall, 1857), new record

1 male, ZRC.ARA.90, Paya mangrove, Pulau Tioman, det. D.X. Song, coll. D. Li, 26 Jun.1999.

Gea spinipes C. L. Koch, 1843

1 female, ZRC.ARA.130, Genting, coll. J.A and F. Murphy, 1-15 Feb.1988.

CLUBIONIDAE Wagner, 1887

Clubiona meraukensis Chrysanthus, 1967, new record

1 female, ZRC.ARA.64, Paya mangrove, Pulau Tioman, det. D.X. Song, coll. D.Q. Li, 26 Jun.1990.

CORINNIDAE Karsch, 1880

Oedignatha mogamoga Marples, 1995

1 male, 2 females, loop trail near Sg. Kanchin, pitfall, Rompin, Pahang, det. Murphy, 20 Jul.1990.

LIOCRANIDAE Simon, 1897

Teutamus politus Thorell, 1890

1 female, pitfall, loop trail near Sg. Kinchin, Rompin, Pahang, det. Murphy, 20 June 1990.

Table 1. The spider species list belonging to Peninsular Malaysia (PM) / Malaysia (MAL) and other country distributions compiled from references as indicated in columns 2 and 3. Other countries where abbreviated are as follows: AU=Australia, BO=Borneo, CB=Cambodia, CH=China, HK=Hong Kong, IND=India, Indon=Indonesia, JA=Java, JP=Japan, MY=Myanmar, NG>New Guinea, PH=Philippines, PK=Pakistan, SB=Sabah, SL=Sri Lanka, SP=Singapore, SR=Sarawak, SU=Sumatra, SUL=Sulawesi, TL=Thailand, TW=Taiwan, VN=Vietnam.

405			

* notes as indicated within the table synonymous (syn.) species given or other information.

** due to unknown specific areas, distributions stated as "all" or "cosmopolitan" are not considered unless supported by another reference

*** presence of species as reported in J.K.H. Koh (1991)

**** presence of species as first described in Zhang et al (2006)

Table 2. New records of spiders for Peninsular Malaysia with some added notes .

Family / Species List	Notes on aspects of taxonomy and/or country distribution	Other related notes e.g descriptions, habitat and natural history
FAMILY: ARANEIDAE		
1. <i>Cyclosa insulana</i> (Costa, 1834)	Type locality Italy; have been recorded from Indonesia, Myanmar, Singapore, Thailand and Vietnam.	Characteristic feature of the species web is the presence of stabilimentum.
2. <i>Cyrtophora moluccensis</i> (Doleschall, 1857)	Type locality Indonesia; ranging from China, Indonesia to Japan and Australia.	Webs normally located in shrubs.
FAMILY: CLUBIONIDAE		
3. <i>Clubiona meraukensis</i> Chrysanthus, 1967	Previously known only in New Guinea. leaves that may be dead or alive.	Can be found in shrubs seeking shelter in
FAMILY: LYCOSIDAE		
4. <i>Pardosa sumatrana</i> (Thorell, 1890)	Type locality Sumatra of wide distribution; Hong Kong, India, Indonesia, Japan, Nepal, Philippines, Sri Lanka, South China, Sumatra.	Ground living spiders living in grassy areas, actively hunting down preys. Male shows courtship displays by up and down movements of the palps.
5. <i>P. zhanjiangensis</i> Yin, Wang, Peng & Zie, 1995	Type locality Guangdong, China.	Able to thrive in swampy areas.
FAMILY: PISAURIDAE		
6. <i>Dolomedes mizhoanus</i> Kishida, 1936	Type locality Japan; also found in Taiwan and little information on South East Asian species.	Exploit waterside habitats and able to prey on small fishes.
FAMILY: SALTICIDAE		
7. <i>Epeus flavobilineatus</i> (Doleschall, 1859)	Type locality Java, also found in Singapore	Found in forests including mangroves and gardens
8. <i>E. glorioides</i> Zabka, 1985	Type locality Vietnam; also found in Singapore and South China.	A brightly coloured species roaming on garden or forest foliage.
9. <i>Myrmarachne elongata</i> Szombathy, 1915	Type Uganda (Africa), also found in Myanmar and Vietnam.	These species are good ant mimics wander above ground.
10. <i>Plexippus paykulli</i> (Audouin, 1826)	Type locality Egypt; wide ranging patterns; Africa, China, Indonesia, Japan, New Guinea, Philippines, Singapore and Vietnam.	Versatile lifestyle; living in mangroves, near water and agriculture land feasting on agricultural pests such as armyworm.
11. <i>Portia fimbriata</i> (Doleschall, 1859)	Type locality from Ambon, Indonesia with a wide distribution in Australia, Nepal, Sri Lanka and Taiwan.	Very rough overall appearance with a characteristic leg segments suitable for stealthy movements on prey's web. This species is a spider eater and can be found in or near other spider's web.
12. <i>Stagetillus opaeiceps</i> Simon, 1885	Species only known from type locality i.e Sumatra.	Typically long and narrow abdominal shape.
13. <i>Thianitara spectrum</i> Simon, 1903	Known from type locality, Sumatra.	Males seemed to resemble the more common congener, <i>T. bhamoensis</i> .
FAMILY: TETRAGNATHIDAE		
14. <i>Leucauge decorata</i> (Blackwall, 1864)	Type locality East Indies and distributional regions are Hong Kong, Taiwan and Paleotropical.	Build large webs in areas of grasses, shrubs to tall trees. Males are distinctly much smaller than females.
15. <i>L. tessellata</i> (Thorell, 1887) synonymous to <i>L. ligysma</i> Wang, 1991	Type locality Yunan, China	Dorsal abdomen with dark patches.
16. <i>Tetragnatha josephi</i> Okuma, 1988	Previously known only from type locality, Singapore	Characteristic long features from forward projecting fangs to abdomen and legs. Build webs in grasses to tall trees or near water, even in water tanks.
17. <i>Tylorida striata</i> (Thorell, 1877)	Type locality Sumatra. Also found in Australia, China, Japan, Philippines, Singapore, Taiwan.	Commonly found in grassy areas of gardens and forest fringes. Has been recorded in ricefields.

Table 2. New records of spiders for Peninsular Malaysia with some added notes .

Family / Species List	Notes on aspects of taxonomy and/or country distribution	Other related notes e.g descriptions, habitat and natural history
FAMILY: THERIDIIDAE		
18. <i>Achaeareana t-notatum</i> (Thorell, 1895)	Type locality Myanmar, reported present in Singapore.	Abdomen with a characteristic shape in profile. Can be found in gardens and mangroves.
19. <i>Moneta mirabilis</i> (Bösenberg & Strand, 1906)	Type locality Japan, also found in Taiwan and Singapore.	In plan view the abdomen has a characteristic triangular shape.
FAMILY: THOMISIDAE		
20. <i>Phrynarachne decipiens</i> (Forbes, 1883)	Type locality Java, also found in Sumatra.	Ability to camouflage well in taking appearance of bird excrement.

LINYPHIIDAE Blackwall, 1859

1989; 2 females, 2 males, Pulau Tioman, coll. D.Q. Li, 27 June 1999.

***Nasoona prominula* Locket, 1982**

1 female, 1 male, ZRC.1994.51-52, leaf litter, Genting, Pahang, col. J.A & F. Murphy, 26 Nov.1990.

FAMILY: OXYOPIDAE Thorell, 1870***Oxyopes birmanicus* Thorell, 1887**

1 male, ZRC.ARA.249, Juara track, Pulau Timan, det. Song, coll. D.Q. Li, 24 June 1999; 2 females, ZRC.ARA.247, Sg. Mapor, Johore, coll. H.K.Lua; 1 male, waterfall, Fraser's Hill, Pahang, coll. H.K.Lua, 31 Dec 1989; 1 female, swamp forest, North Selangor, 17 June 1991.

Parameioneta spicata* Locket, 1982*FAMILY: PISAURIDAE Simon, 1890**

1 female, 1 male, ZRC.1994.49-50, leaf litter, Genting, Pahang, coll. J.A. Murphy, 30 Nov. 1990.

***Dolomedes mizhoanus* Kishida, 1936, new record**

1 male, ZRC.ARA.107, Sg. Paya. Tioman, coll. D.Q. Li, 26 June 1999.

LYCOSIDAE Sundevall, 1833***Eurychoera quadrimaculata* Thorell, 1897**

1 female, Genting, Pahang, 1-15 Feb 1988; 3 females, Gunung Panti area, logging track, Johore, coll. C.M Yang, 20 Sept 1990; 1 male, 2 females, Trengganu rocky waterfall, coll. H.K. Lua, 18 March 1992; 2 females, peat swamp forest, North Selangor, coll. H.K. Lua, 19 June 1991,

***Pardosa sumatrana* (Thorell, 1890), new record**

1 male, ZRC.ARA.275, Sg. Paya, Pulau Tioman, 26 June 1999.

Polyboea vulpina* Thorell, 1895**P. zhanjiangensis* Yin, Wang, Peng & Zie, 1995, new record**

1 male, 1 female, ZRC.ARA.293 / ZRC.ARA.1994-35-36, Genting, Pahang, 18-22 Aug. 1979.

FAMILY: NEPHILIDAE Simon, 1894***Nephilengys malabarensis* (Walckenaer, 1842)**

6 females, 6 males, ZRC.ARA.236-233, on walls Gap Rest House, Selangor, det. D.H. Murphy, 16 Aug 1967; 3 females, Frasers Hill, Pahang, coll. H.K. Lua, 31 Dec

FAMILY: PHOLCIDAE C. L. Koch, 1850

Uthina atrigularis Simon, 1901

1 female, 1 male, ZRC.ARA.393, Genting, 1-15 Feb 1988.

FAMILY: PSECHRIDAE Simon, 1890

Fecenia macilenta (Simon, 1885)

1 female, ZRC.ARA.126, Genting, Pahang, det. D.X. Song, 26 Nov. 1990.

Psechrus singaporenensis Thorell, 1894

1 male, Call. No. 1982.1.18.26, dark caves, Batu Caves, det. Walter C. Sedgwick, coll. E. Seimund, 19 Dec 1928.

FAMILY: SALTICIDAE Blackwall, 1841

Bristowia heterospina Reimoser, 1934

1 female, 1 male, ZRC.1996-168-169, leaf litter, Banting, Selangor, det. J.A. Murphy, 16 May 1981.

Carrhotus sannio (Thorell, 1877)

1 female, ZRC1996-154, garden, Layang-layang, Johore, det. J.A. Murphy, 21-23 Jul 1979.

Cosmophasis umbratica Simon, 1903

1 female, 1 male, ZRC.1996.155-156, garden, Layang-layang, Johore, det. J.A. Murphy, 21-23 July 1979.

Epeus flavobilineatus (Doleschall, 1859), new record

1 female, 1 male, ZRC.1996.180-181, garden, Layang-layang, Johore, det. J.A. Murphy, 21-23 July 1979.

E. glorioides Zabka, 1985, new record

1 female, 1 male, ZRC.1996.177-178, remnant forest, Layang-layang, Johore, det. J.A. Murphy, 27 July 1979.

Harmochirus brachiatus (Thorell, 1877)

2 males, ZRC.ARA.137, on bushes, Genting, Pahang, det. J.A. Murphy, 26 Nov 1990.

Myrmicarachne elongata Szombathy, 1915, new record

1 female, 1 male, ZRC.1996.202-203, remnant forest, Layang-layang, Johore, det. J.A. Murphy, 27 July 1979,

Neobrettus tibialis (Prosztynski, 1978)

1 female, 1 male, banana trunks, Pahang, Genting, det. J.A. Murphy, 29 Nov 1990.

Plexippus paykulli (Audouin, 1826), new record

1 female, ZRC.1996.195, garden, Genting, Pahang, det. J.A. Murphy, 1-15 Feb 1988.

Portia fimbriata (Doleschall, 1859), new record

1 female, 1 male, ZRC.1996-154, garden, Genting, Pahang, det. J.A. Murphy, 1-7 Feb 1988.

P. labiata (Thorell, 1887)

1 male, ZRC.1996.192, remnant forest, Layang-layang, Johore, det. J.A. Murphy, 27 July 1979.

Rhene flavigera (C. L. Koch, 1848)

1 female, 1 male, ZRC.1996.194-195, garden, Genting, Pahang, det. J.A. Murphy, 26 Nov 1990.

Stagetillus opaeiceps Simon, 1885, new record

1 female, ZRC.1996.165, garden, Genting, Pahang, det. J.A. Murphy, 18 Aug 1979.

Thiania bhamoensis Thorell, 1887

1 female, 1 male, ZRC.1996.163-164, bushes, Pinang, det. J.A. Murphy, 16-17 Feb 1979.

Thianitara spectrum Simon, 1903, new record

1 female, 1 male, ZRC.1996.166-167, garden, Genting, Pahang, det. J.A. Murphy, 20 Aug 1979.

FAMILY: SCYTODIDAE Blackwall, 1864

Scytodes pallida Doleschall, 1859

1 female, 1 male, ZRC.1994.32-33 garden, Genting, Pahang, det. J.A. Murphy, 27 Nov. 1990.

FAMILY: TETRAGNATHIDAE Menge, 1866

Leucauge celebesiana (Walckenaer, 1841)

4 females, ZRC.ARA.184, Pulau Tioman, Pahang, D.X. Song, coll. D.Q. Li, 24 June 1999; 1 female, 1 male, ZRC.ARA.234, Paya mangrove, Tioman, 26 June 1999.

Leucauge decorata (Blackwall, 1864), new record

1 female, ZRC.ARA.185, Genting, Pahang, 1-14 Feb 1988.

L. tessellata (Thorell, 1887), new record

In synonymy: *L. lygisma* Wang, 1991

1 male, ZRC.188, Tioman, det. D.X. Song, coll. D.Q. Li, 26 June 1999.

Tetragnatha josephi Okuma, 1988, new record

1 male, ZRC.ARA.365, Tioman, coll. D.Q. Li, 26 June 1999.

Tetragnatha mandibulata Walckenaer, 1842

1 male, ZRC.ARA.336, Sg Paya, Tioman, coll. D.Q. Li, 26 June 1999.

Tylorida striata (Thorell, 1877), new record

1 female, 1 male, ZRC.ARA.390, Pahang, 14 Feb 1988.

FAMILY: THERAPHOSIDAE Thorell, 1869

Coremiocnemis valida Pocock, 1895

1 male, ZRC.ARA.177, Johore, Nov 1923; 1 female, ZRC.ARA.418, Langkawi, Kedah, 23 April 1928; 3 females, ZRC.ARA.67, Fraser's Hill, Pahang, coll. H.M. Pendlebury, 1 Feb 1929; 2 females, ZRC.ARA.68, Penang; 1 female, ZRC.ARA.179, Renggam, Johor, det. D.X. Song, 3 Aug 1938; 1 male, ZRC.ARA. 181, Kuala Tahan, Pahang, coll. C.S. Ogilvia, 1948; 1 female, ZRC.ARA.07, Kota Tinggi, Johore, coll. Tan Kiou Nee, 11 Jan 1971.

C. cunicularia (Simon, 1892)

1 female, Fraser's Hill, height of 4,000 feet, inhabits silk lined burrows on earth banks, det. B.F. Striffler, col. E. Loh & K. Lim, 2 June 1990.

Lampropelma violaceopes Abraham, 1924

1 male, ZRC.ARA.178, Kuala Lipis, Pahang, det. H.C. Abraham, 30 June 1929.

Selenocosmia javanensis (Walckenaer, 1837)

1 female, ZRC.ARA.332, Bukit Cerakah, H.C. Abraham, 26 July 1921; 1 female, 1 male, ZRC.ARA.334, Selangor, Kuala Lumpur, H.M. Pendlebury, Feb 1924.

FAMILY: THERIDIIDAE Sundevall, 1833

Achaearanea mundula (C. L. Koch, 1872)

2 females, ZRC.ARA.18, Genting, H.K.Lua, 30 Dec. 1989.

A. t-notatum (Thorell, 1895), new record

1 female, 1 male, ZRC.1994-63-64, garden, Genting, Pahang, det. J.A.Murphy, coll. J.A & F. Murphy, 1 Feb 1998.

A. fissifrons O.P. -Cambridge, 1869

2 females, 2 males, ZRC.ARA.41, Paya mangrove, Pulau Tioman, coll. D.Q.Li, 26 June 1990.

Coleosoma blandum O.P. -Cambridge, 1882

1 female, 1 male, ZRC.ARA.66, Genting, 26 Nov. 1990; 1 female, 1 male, ZRC.1994.56-57, garden, Genting, Pahang; coll. J.A & F. Murphy, 26 Nov 1990.

Moneta mirabilis (Bösenberg & Strand, 1906),
new record

1 female, 1 male, Fraser's Hill, Pahang, det. I. Agnarsson, coll. H.K. Lua, 31 Dec 1989.

Phoroncidia bukolana Barrion & Litsinger, 1995,
new record

1 male, Fraser's Hill, Pahang, coll. H.K.Lua, 31 Dec 1989.

P. lygeana (Walckenaer, 1841)

1 female, 1 male, ZRC.ARA.1994.60-61, garden, Genting, Pahang, det. J.A. Murphy, 1-15 Feb 1988.

FAMILY: THOMISIDAE Sundevall, 1833

***Phrynarachne decipiens* (Forbes, 1883), new record**
1 female, 1 male, ZRC.ARA.284, Ulu Gombak, 7 Nov 1969.

FAMILY: ULOBORIDAE Thorell, 1869

***Zosis geniculata* (Olivier, 1789)**

1 female, 1 male, ZRC.1994.10-11, garden, Genting, Pahang, coll. J.A & F. Murphy, 18-21 Aug 1979.

FAMILY: ZODARIDAE Thorell, 1881

***Mallinella cinctipes* (Simon, 1893)**

2 females, ZRC.1994.3-4, pitfall, loop trail, Ulu Kinchin, Pahang, coll. H.K. Lua et al., 20 June 1990.

CONCLUSION

The current compilation on spiders from Peninsular Malaysia although with an impressive total species number of 425 species, in our opinion is far from complete. This work had indicated that the collections were rather skewed towards specific localities, for example tourist resorts (Batu Caves, Tioman Island, Fraser's Hill and Genting Highlands) and National Parks. It is imperative therefore to conduct a comprehensive sampling throughout Peninsular Malaysia to reveal the actual species numbers, accurate distribution patterns, state of endemism and current species status. We see this as our vital role and subsequent work to be focusing on so as to perhaps outrun the existing and forthcoming anthropogenic development.

ACKNOWLEDGEMENTS

There are many parties who have made this work possible. The first author wishes to acknowledge: NUS, especially her host and members of the Spider Lab for the sabbatical attachment; RMBR headed by Prof Peter Ng and his many helpful staff members in which Ms H.K. Lua needs a special mention. Not forgetting our outmost gratitude to D.H. Murphy, C.M. Yang and H.K. Lua for the collections, D.X. Song for identifications and 2 anonymous reviewers helped to improve the manuscript.
